

Problem Description

Many suffer from lack of time to go to flower shops to gift their loved ones.

We will create an application to save time and effort and arrange

ideas for booking and gifting a bouquet made with love.

Application Description

- At first, the program will welcome the person who wants to give the gift ✓
- The program will ask for the name of the sending person, the name of the person who would like to gift him, and his personal number for communication ✓
- After that, the program will display a menu that includes the existing packages, the number of roses in each package, along with the prices, and the reservation will be registered ✓
- After that, the program asks for the sender's ATM card number for electronic payment ✓
- Finally, the program will display the full details of the application ✓

Classes

We will use 3 classes:

Customer class

- Name of the sender ✓
- Name of the person who would like to gift him ✓
- Number for communication ✓
- Sent all information to receipt class ✓

Flower class

Display a menu that includes:

- existing packages ✓
- number of roses in each package ✓
